

## French Polynesia Master Diver Agreement

- 1) I understand that I should check my breathing gas and my gear before each and every dive and complete all necessary fields of the Nitrox Log before the dive and the Dive Log after the dive.
- 2) I understand that I should follow the instructions of my dive guide both underwater and at the surface.
- 3) I understand that, by French Polynesian law, the maximum depth for Open Water and Advanced Open water divers (even those with a Deep Specialty) is 29 meters and that Master Liveboards expects divers to calculate their Maximum Operating Depth using a maximum allowable partial pressure of 1.4. I understand that I should respect the maximum depth for each dive as established during the briefing by the Director of Diving.
- 4) I understand that I should not to descend to a greater depth than my dive guide.
- 5) I understand that I should communicate with my dive guide. This includes: keeping my dive guide informed of my breathing gas consumption and alerting my guide to any problems I have during the dive.
- 6) I understand that I should to stay together with my buddy and with my group. I will remain close enough to my dive guide to ensure that he/she can see me and I can see him/her. I understand that I will not ascend to the surface alone or in a buddy pair, but rather together with my entire group.
- 7) I understand that my entire group will ascend when the first diver in the group is low on air and that I should surface together with my group below the surface marker buoy deployed by my dive guide or another member of my group.
- 8) If I become separated from my dive group, I understand that I should search for one minute. If I do not find my group, I will surface at a rate not to exceed 9 meters per minute, complete a safety stop of 3 minutes at 5 meters, deploy my surface marker buoy, and ascend to the surface. If I find another group, I understand that the guide of that group, upon realizing that he/she has found a "lost" diver, will ascend with his/her entire group.
- 9) If I hear the emergency recall alarm, I will end my dive, ascend at a rate not to exceed 9 meters per minutes, complete a safety stop of 3 minutes at 5 meters, deploy my surface marker buoy, and ascend to the surface.
- 10) I understand that I should not touch coral or touch, chase or otherwise harass marine life.
