

Useful information for photographers & videographers

Every country has its own specific rules and regulations regarding (underwater) photography and the use of drones, which we have listed below. Please take notice of these rules and regulations. We strive to ensure all information on this page is accurate and up to date. However, the information on this page is naturally subject to change so we cannot guarantee the accuracy of all contents. We recommend that you always check with the local authorities directly to avoid disappointment.

Always speak with your Cruise Director and Captain before flying your drone!

Bahamas

- Drones are only allowed with permission obtained in advance
- Do not attach your camera to your body in case of curious sharks
- Go Pro stick should not be longer than 50cm and need to be dark coloured
- No constant use of flash close to sharks' eyes

French Polynesia

- No drones are allowed near the airport; flying low over villages and settlements and invading people's privacy is not acceptable without their permission
- Drones should be declared at custom for a temporary importation

Galapagos

- Drones in Galapagos are not permitted for use by tourists. The use of drones is only permitted under strict regulations for research and monitoring
- No strobes or flash lights allowed near mola molas (sunfish/moonfish)
- Underwater scooters are not allowed in the Galapagos

Indonesia

- Use of strobes and flash lights around the manta cleaning stations is not allowed in both Raja Ampat and Komodo
- Drones can be used, but not near the airport

Maldives

- Drones can be used but it is prohibited to film private resorts, islands or private & cargo vessels
- No strobes or flash lights are allowed when diving or snorkeling with whale sharks
- Be aware that photo- and videographers need to enter the water with their camera **in hand** and proceed to a quick descent afterwards. Reasons for this are: the strong surface currents, the need for negative entries on most dives, together with not having a tender and the high entry from the dhoni. This all makes it very hard to jump in without camera and get the crew to hand over the camera to you
- Go Pro cameras are for rent on the Maldives Master

Palau

- No gloves are allowed when diving in Palau
- No jet powered vehicles are allowed

Philippines

Rules and regulations in the Philippines prohibit the following:

- Diving with gloves
- Use reef hooks and nudi pointers in Tubbataha
- Use of drones in Tubbataha
- Make dives longer than 60 minutes in Tubbataha
- Use of gloves, sticks/reef hooks, flash lights and/or strobes in **Monad Shoal (thresher shark dive)** and **Oslob (whale shark dive)** - both are on Visayas itinerary

Red Sea/Egypt

- Drones are not allowed in Egypt - we also dive in many a 'sensitive' area where there is military presence
- Reef hooks, muck sticks and gloves are not necessary and frowned upon. We actively discourage using these items for conservation purposes. Gloves are only permitted for wreck diving and for medical necessity

Solomons & PNG

- No drones are allowed near the airport; flying low over villages and settlements and invading people's privacy is not acceptable without their permission
- Guests should always confer with the Captain and obtain permission before launching a drone

Thailand & Myanmar

- Drones have to be registered upon arrival in Thailand & Myanmar and advance permission is required to fly a drone. More info for drone regulations in [Thailand](#) and [Myanmar](#).

Truk Lagoon/Bikini Atoll

- Strictly no drones allowed on Kwajalein as it is an active US military base; this includes Ebeye, for its proximity to Kwajalein!
- No drones allowed near Chuuk airport
- Flying low over villages and settlements and invading people's privacy is not acceptable without their permission
- Wide-angle is recommended due to the nature of diving (big wrecks)
- Guests should always confer with the Captain and obtain permission before launching a drone
